Factory Scorpius Char Test Plan for J5xx

Module: Scorpius
Station: Scorpius Char (DEV40)
Build: P1
Release Date: 03 April 2020

This Document Covers the Following Products: J5xx
Revision: P1_V1.4
<rdar://problem/56766302> J5xx Scorpius Factory ERS
<rdar://problem/60027625> J3xx&J5xx Scorpius ERS - Foxconn

[Note: Anything in brackets is expected to be updated / deleted for the official document]

P0	1.0	8 January 2020	Initial release for J5xx P0 Build. Based on J307 P1. Limits need to be updated.	Bhushan Koli
	1.1	21 January 2020	General updates on limits and smokey commands	Bhushan Koli/Alberto M/Nan Liu/ Frank B
P1	1.2	19 February 2020	Reverted back to original smokey commands	Bhushan Koli
	1.3	21 February 2020	Updated Minimum Vboost requirement from 6V to 6.1V	Bhushan Koli/Mikhal
	1.3	21 February 2020	Updated Minimum Vboost requirement from 6V to 6.1V	Bhushan Koli/Rex H/Nan Liu
	1.4	3 April 2020	Updated power flow test procedure to include VCC main and Vbatt measurements Updated LPP limits Added Dotara Temperature measurement Updated command and response format of LPP and VCTx respectively Updated procedure to disable LFOD during Vsense & Isense measurement	Bhushan Koli/Rex H/Nan Liu/ Frank

2.   Purpose

This document describes the FATP Scorpius Char test plan for the J5xx inductive charging Tx module for P0.

3.   Scope

The scope of this document is the Scorpius only module of the J5xx products. It covers FATP tests of the following high level features:

Test	Scorpius Test
LPP ping and delta calculation	✓
Power Flow & Efficiency	✓
Comms - PingPong	✓

5.   Glossary & Definitions

Acronym	Term	Description
AMPL	Amplitude	-
ASK	Amplitude shift keying	-
Ballast	Ballast Load	Internal load within Aculeus/Iktara that maintains a constant current load.
CAL	Calibratied	These are after calibration values.
COMM's	Communications	Referring to ASK and FSK communications
CPLG	Coupling	-
CTX	-	Series resonant capacitance.
DC	Duty Cycle	-
DSBL	Disable	-
ENBL	Enable	-
FOD	Foreign Object Detection	Detection mechanism for metallic objects near the inductive power link
FREQ	Frequency	-
FSK	Frequency shift keying	-
FXST	Fixture Setup	-
Kmax	-	Maximum Coupling Coefficient
Kmin	-	Minimum Coupling Coefficient
LPP	Low Power Ping	Object/Rx detection system
MPE	Maximum Permissible Exposure	Protection scheme to limit the maximum leakage H-field when Scorpius is charging
Rx	Receiver	Wireless Power Receiver. Also referred to as PRx
SCRP	Scorpius	Reference for searching Scorpius Module related Data in Insight.
Tx	Transmitter	Wireless Power Transmitter. Also referred to as PTx(J5xx MLB)
VCTX	-	Voltage across Tx coil
VBoost	-	Voltage across Boost output
VRect	-	Voltage across Rx Rectifier

6. Critical and Frequently Used Commands

6.1. Quiesce Test Mode

After programming the Tx defaults to NominalMode (LPP > Digital Ping > Power negotiation > Closed loop).

The following command needs to be sent to the Tx to enable QuiesceMode whereby certain test commands are then enabled.

A power cycle will mean the unit needs to be re-programmed as the firmware application is run from SRAM.

This is the test mode whereby additional commands for test/validation are active.This command will disable everything except the MCU i.e. Boost, Bridge, LPP switch will be disabled.

Resets into the quiesce mode with the bridge disabled.

smokey ScorpiusHid --run --test "Set" --args "ReportID=0x09, ReportPayload={0x01}"

> **Note:** *This command i.e. Quiesce Mode needs to be set once at beginning of testing i.e. from* **Section 8.1. Load FW** *or unless unit is reset or power cycled or Nominal Mode has been set.* **If the unit is power cycled you will need to load fw again.** *Nominal Mode*

6.2. Nominal Mode

This is the normal runtime mode. Here, a subset of commands used for test/validation are deactivated.

smokey ScorpiusHid --run --test "Set" --args "ReportID=0x09, ReportPayload={0x00}"

Resets into the nominal mode where it will start the LPP-> Digital Ping-> Power Negotiation-> Closed loop sequence.

7. Overview

The block diagram below shows the overall end-end test coverage for the inductive Scorpius module. This document covers Scorpius Char Station.
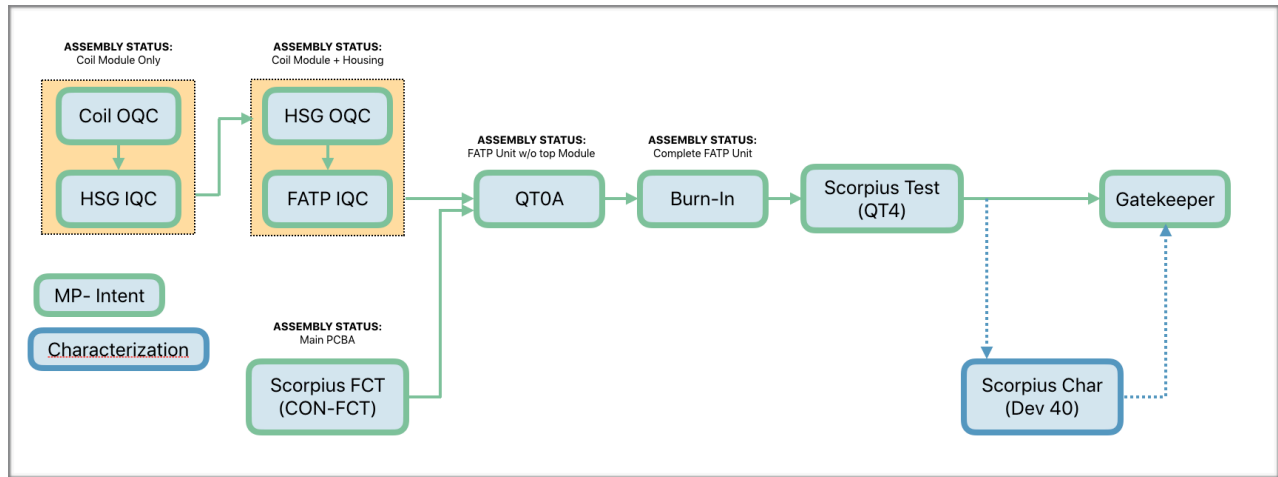

7.1. Summary of Test Coverage

	Kmax	Knom	Kmin
LPP	no load	no load	no load
Digital Ping	0.1C	n/a	0.1C
Open Loop + Ping Pong	0.1C, 3C, 10C	0.1C, 3C, 10C	0.1C, 3C, 10C

7.2. Fixture Coupling specs

Throughout this document various tests will have different limits depending on the offset position i.e. coupling. Ensure close attention is paid to the tables shown for the different coupling positions, loads and limits.

All = all possible positions (MaxK, NomK,MinK)

Physical parameter / InSight Keys Recorded	Position (mm)	K Spec	Measured Results (averaged after 5 readings)
KMax	0, 0.83, 0	0.535 - 0.610	Limits to be used need to be same as IQC_coupling station. FYI only. To be updated.
KNom	D1.1, 0.88, L1.1	-	
KMin	D1.5, 0.93, L1.5	0.440 - 0.530	

8. Test Coverage @ Scorpius Char Station

8.1. Load Tx FW & Read Version

Description:- Load Tx FW. Dotara has no NVRAM and therefore will lose all the memory/setting after power cycling or load fw. Dotara will need to load the fw after each power cycling.

Failure Mode(s) Captured:TBD

Test Setup and Procedure:

Step	Description	Interface	Command / Notes
Note: This command i.e. Quiesce Mode needs to be set once at beginning of testing i.e. from **Section 8.1. Load FW** or unless unit is reset or power cycled or Nominal Mode has been set. **If the unit is power cycled you will need to load fw again.**			
A	Tell Tx to get out of standalone mode.	TX HID (Diags)	i2c -w 6 0x39 6 **Note:-Send this command 2x times with 1s delay. There may be I2C error reported with this command, but can be ignored.**
B	Tell Tx to enter Quiesce Mode	TX HID	**Note:** Need to send the below command after every 2nd time of the above command within 3sec or with minimum or no delay as possible of above command. You cannot enter Quiesce mode without exiting the standalone mode. smokey ScorpiusHid --run --test "Set" --args "ReportID=0x09, ReportPayload={0x01}"
1	Set Vin 3.6V. Or Preparation to pull high: PMU_TO_DOTARA_EN_EXT	Fixture	pmugpio --pin 14 --output 1 --pushpull

8.4. Low Power Ping (LPP)

Description: Check the frequency and inductance for LPP at free air vs nominal position coupling.
Failure Mode(s) Captured: Poorly assembled / manufactured coils
Test Setup and Procedure:

Step	Description	Interface	Command / Notes
1	Connect coils at nominal position	Fixture	
2	Send 1.4uS LPP pulse	Tx HID	smokey ScorpiusHid --run --test "Set" --args "ReportID=0x05, ReportPayload={0x00; 0x46}" **Note:** 0x46 gives 70 * 20ns = 1.4uS is the duration of the pulse.
3	Delay 15mS before proceeding	Fixture	
4	Read output parameters of F and L and raw ADC data	Tx HID	To read Frequency, Inductance and Raw ADC data: smokey ScorpiusHid --run --test"Get" --args"ReportID=0x05" **Response: (Received LSB First, Length should be 23bytes)** Byte0: ReportId (should equal 0x05) Byte1: Error code (0x00-> no error) Byte2: Sub-cmd (should be 0x00) bytes3-6: Floating point value of frequency Bytes7-10: Floating point value of inductance Bytes19-22: Buffer address of raw ADC data Bytes23-26: Number of raw ADC data elements (of size uint16_t)
5	Collect raw ADC samples and upload to Insight	Tx HID & Fixture	Collect Pointer to raw LPP data by sending the following command from bytes19-22 in the above response.Use the above info to read the raw data and upload to insight. Use the command Below to read the raw ADC buffered data smokey ScorpiusHid --run --test "Mem16" --args "Address=<*address*>, Length=<number of bytes to read>" smokey ScorpiusHid --run --test "Mem16" --args "Address=<buffer address>, Length=220" The LPP data is 660 bytes. Therefore 3 loops of above should finished reading all the LPP data
6	Repeat steps 2 - 5 x 100 times	Fixture & Tx HID	Save all of the data as a single log file for each unit and upload to InSight.
7	Calculate Free Air Δ Tx Frequency & Δ Tx Inductance _{Averaged over 100 repeats vs MTP sector Value}	Tx HID & Fixture	Δ Tx Frequency = SCRP_LPP_FREQ_MTP_BEFORE (From Section 8.3) - **Kxx_LPP_Frequency_100_avg** Δ Tx Inductance = **Kxx_LPP_Inductance_100_avg** - SCRP_LPP_L_MTP_BEFORE (From Section 8.3)
8	Record parameters as per the table below	Fixture	Apply limits accordingly
9	Repeat steps 2 - 8 at all coupling position	Fixture & Tx HID	Coupling Position :- KMax, KNom & KMin

8.5. Digital Ping Level Tests

Description: This test required ginger/B332 dev board, both Tx and Rx coil. Test digital ping level (6Vboost and 100deg bridge phase) at 0.1C charge rate at various positions and Vrect and Ping Pong Tests. Ping Pong test is performed to check In-band comms by sending a train of bits as ASK (ginger board/B332 Dev Board).

Failure Mode(s) Captured:
1. Vrect: - Ginger/[B332-TBD] reach UVP or OVP at the digital ping level
2. Ping Pong :-Test Dotara's Internal ASK/FSK Communication.

Test Setup and Procedure:
Order of load ramping as follows:
- Set VBOOST to **6.1V**
- Adjust bridge phase from **100 degrees**
- Set loading to 40mA ballast (No Eload i.e. turn Eload off/Set Eload to 0A)

8.6. Power, Efficiency & Ping Pong Tests

Description: This test required Ginger/~~B332 dev~~ board, both Tx and Rx coil. Transferring power at various loads / charge rates (0.1C, 3C, 10C) at various positions and measuring power and efficiency and Ping Pong Tests. Ping Pong test is performed to check In-band comms by sending a train of bits as ASK (Ginger board/~~B332 Dev~~ Board).

Failure Mode(s) Captured:

1. Power & efficiency:-Unit is not able to transfer required power at different load conditions at required efficiency
2. Ping Pong :-Test Dotara's Internal ASK/FSK Communication.

Test Setup and Procedure:

Order of load ramping as follows:

- Adjust bridge phase from 0 - 180 degrees to reach target Vrect at desired load.
- If target Vrect still cannot be achieved with a phase shift of 180 degrees?
- Start increasing VBoost.
- VBoost should only be adjusted when phase = 180 degrees.
- To reach the desired Vrect start ramping the boost voltage.
- To reach the 10C load step the load with 50mA to avoid OVP.

8.7. Final MTP Sector Check After Tests.

Description: Make sure FW is in a good state at the end of the test. [TBD]
Failure Mode(s) Captured: TBD
Test Setup and Procedure: Refer below

Step	Description	Interface	Command / Notes
1	Pull Low test pin **TP93EF** i.e. **"AOP_TO_DOTARA_RESET_L"** to reset Scorpius	Tx Diags	pmugpio --pin 18 --output 0 --pushpull
	Wait 500ms	Fixture	
	Pull High test pin **TP93EF** i.e. **"AOP_TO_DOTARA_RESET_L "**	Tx Diags	pmugpio --pin 18 --output 1 --pushpull
2	Wait 1s	Fixture	
3	Preparation	Tx Diags	pmugpio --pin 14 --output 1 --pushpull
4	Tell Tx to get out of standalone mode.	TX HID (Diags)	i2c -w 6 0x39 6 **Note:-Send this command 2x times with 1s delay. There may be I2C error reported with this command, but can be ignored.**
5	Load Tx FW	Tx HID	**Note**: Need to send this command every time within **3sec** of above command. You cannot enter Load FW without exiting the standalone mode. ***Path for FW might change.*** smokey ScorpiusHid --run --test "FwLoad" --args "PathToFwLoad='nandfs:\\AppleInternal\\Diags\ \Scorpius\\J517J522\\ScorpiusTx-dotara.bin'"
6	Wait 1s	Fixture	Scorpius FW will take less than 1 second to boot
7	Tell Tx to get out of standalone mode.	TX HID (Diags)	i2c -w 6 0x39 6 **Note:-Send this command 2x times with 1s delay. There may be I2C error reported with this command, but can be ignored.**
8	Tell Tx to enter Quiesce Mode	TX HID	**Note**: Need to send the below command after every 2nd time of the above command within **3sec** or with minimum or no delay as possible of above command. You cannot enter Quiesce mode without exiting the standalone mode. smokey ScorpiusHid --run --test "Set" --args "ReportID=0x09, ReportPayload={0x01}"

A. Appendix - B332 Dev Board UART Baud rate

The B332 Dev Board is used to send commands to I2C of Aculeus using UART cable. Follow the steps below to open the B332 Dev Board UART.

1. Connect UART (1MBite baudrate, 1.8V) to J89 (Pin9 & Pin 10)
2. Open Terminal
3. nanocom -w 0 -c 1000000,n,8,1
4. Select your Connected UART option.
Note:-Testing with Ginger Rx board is a backup incase factory is not able to get B332 open loop test up and running on time.

B. Feature DRI Comments for Changes to this Document

Feature	DRI	Description/Comments/Reason for Change	Date	Approved and released in Version:
General	Bhushan/Alberto/Nan/Frank	Limits update from J307P0 to J5xx, data based on 4 units. Updated all the smokey command. Added command to measure Vbatt, Ibatt, PPVCC_MAIN	21 January 2020	P0_V1.1
General	Bhushan	Reverted back to original smokey command.	19 February 2020	Bhushan/P1_V1.2
Power Transfer	Mikhal	Minimum boost requirement has changed from 6000mV to 6100mV.	21 February 2020	Mikhal/Bhushan/P1_V1.2
Power Transfer	Bhushan/Rex	Updated power flow test procedure to include VCC main and Vbatt measurements	11 March 2020	Rex/Nan/Bhushan/Frank/P1_V1.3
LPP	Frank	Updated LPP limits		
Dotara	Bhushan	Added Dotara Temperature measurement	3 April 2020	Bhushan/Rex/Nan/P1_V1.4
LPP & VCTX	Bhushan	Updated command and response format of LPP and VCTx respectively		
Power Transfer	Bhushan/Jin/Nan	Updated procedure to disable LFOD during Vsense & Isense measurement
